DataKinetics and SysperTec Announce Partnership Agreement

SysperTec Communication has signed a partnership agreement with DataKinetics, Ltd., the premier North American supplier of solutions improving mainframe applications and DB2 performances.

*"SysperTec is a respected independent software vendor known for quality, professionalism and extensive web-enablement expertise. We look forward to working with SysperTec to enhance and broaden our product line and bring the VIRTEL Web Suite to a whole new group of mainframe and data center operations", says **DataKinetics CEO Allan Zander**. "As we renew our sales efforts, this technology fills an important niche in our growth strategy."*

DataKinetics will use SysperTec's VIRTEL Web Suite technology to provide a rich Web 2.0 interface to its industry leading tableBASE product line. In addition, DataKinetics will market VIRTEL to North American customers that need to leverage their mainframe application assets with Web 2.0 technologies and SOA or WOA integration. SysperTec will distribute DataKinetics' tableBASE products in France and other EU markets.

*"SysperTec is pleased to be an integral part of the expansion of DataKinetics' products and services in North America and we look forward to introducing their innovative tableBASE technology to our customers in France and the EU", stated **Jean Marie Barathe, Managing Director of SysperTec Communication**. "We believe that our VIRTEL product line will be a very visible and important part of the DataKinetics strategy, and should help them drive into untapped markets."*

About SysperTec Communication

SysperTec has over 20 years of experience developing real-time protocol conversion technologies between the IBM mainframe and heterogeneous servers and terminals. VIRTEL Web Suite is SysperTec's web-enabling product line for extending mainframe applications to the web with advanced Web 2.0 functionality and creating interactive, bi-directional integration methods for SOA and WOA initiatives. More than 500 SysperTec Communication products are deployed worldwide.

Visit www.syspertec.com for more information.

About Virtel Web

Virtel Web is both a transactional communications' monitor and an http server installed on the mainframe platform. As such it can natively establish a genuine dialogue between both Web and mainframe environments and facilitates the integration projects and the modernization of application interfaces.

About DataKinetics

DataKinetics, the leader in critical information systems optimization, enables IBM zSeries mainframe data centers to achieve superior performance gains, capacity, and scale using existing applications and hardware. DataKinetics delivers distinct competitive advantage to global Fortune 500 companies to keep them a step ahead of the competition. For 30 years DataKinetics products have been enhancing hundreds of thousands of mission-critical transactions per second every day for banking, insurance, credit card, brokerage house, and retail industries—without fail.

About TableBASE

DataKinetics' flagship product, DataKinetics tableBASE, boosts mainframe applications to achieve greater throughput. The software is designed to define, build, maintain and manage in-memory tables. Accessing memory from RAM is about 1,000,000 times faster than accessing it from disk and, using an advanced architecture, tableBASE allows for high-performance access to tables in memory. Data access from in-memory tables rather than from disk drastically improves performance and flexibility because it uses the shortest and fastest possible path to data. The increased efficiency gained by using the shortest path to data reduces program execution time from hours to seconds. By placing rules in tables that are external to the application logic, time to implement changes to mainframe applications is reduced from months to hours.
