P&V Assurances chooses VIRTEL Web Access to access its CICS business applications

Installed on the z/OS mainframe, Virtel offers simple and secure Pure Web access

P&V Assurances, a Belgian company with a network of 300 independent dealers, has chosen SysperTec's VIRTEL Web Access software to allow its agents to easily and securely access its business applications, regardless of their hardware, software, or Web browser.

Rethinking solutions for accessing business applications

In the past, P&V Assurances provided its agents with the computer hardware needed to access all of their business applications. For its agents who wanted to be free to choose their own equipment, P&V Assurances had to find a more flexible solution that was also stable and secure.

A solution for accessing CICS applications on any client workstation

Virtel Web Access proved to be the only software that could provide access to CICS applications via a secure Pure Web procedure, while being installed directly on the mainframe:

- Secure access to CICS applications from any Web browser
- Total workstation freedom, regardless of the hardware, brand, operating system, or Web browser
- Nothing to install on the client workstation (no Java applets, no plug-ins, etc.)
- Reasonable price
- Fast and simple implementation, requiring no deployment whatsoever

"Virtel Web Access is the only solution that does not have to be installed on the client workstation, is transparent for users, and offers true workstation freedom," says Mark Scheers, P&V Account Manager.

A quick and effective solution to implement

After testing the solution, March Scheers noted that “the solution performs better than a traditional emulator.”

Virtel Web Access was quickly installed on the z/OS platform, with no training necessary.

“This solution requires no deployment and new client workstation maintenance,” boasts Mark Scheers. “Users simply need a special URL with signature-protected secure access.”

Now, agents can securely connect to all of their business applications. The goal is also to use this solution to help the IT support team. It will allow them to access CICS application from any type of remote workstation.
